EDUCATION

B.S. Honors in Computer Science Expected 2029
The University of Saskatchewan Saskatoon, SK
Notable Classes: Data Structures & Algorithms; Web Development; Software Engineering; Intro to Operating Systems (CMPT 332)

TECHNICAL SKILLS

Languages | Python, JavaScript/TypeScript, Java, SQL, HTML, CSS, C/C++
Databases & Tools | PostgreSQL, MySQL, MongoDB, RESTful APIs, Linux, Docker, Git
Frameworks | React, Next.js, Flask, Express.js, TailwindCSS, Expo Application Services (EAS)
AI/ML Tools | Claude Code, Google Gemini, LangChain, Retrieval Augmented Generation, Prompt Engineering

WORK EXPERIENCE

Co-Founder & CEO — CalenDue *September 2025 – Present*

- Leading a 4-person team to build a full-stack AI-powered academic planning platform (Next.js, PostgreSQL, Supabase, Clerk, Prisma) and a companion Expo/React Native live iOS/Android mobile app, reducing semester planning time by **95% (4 hours → 5 minutes)** for **150+ real students**.
- Engineered two GPT-4o-mini AI pipelines: a syllabus extraction engine supporting PDF, DOCX, paste, and tabular exam schedule inputs with prompt-hash caching and 90-day TTL; and Callie, a custom RAG chatbot using pgvector semantic search with hybrid keyword re-ranking and per-course context isolation.
- Shipped 3 calendar integrations — Google Calendar (OAuth2), Apple Calendar (CalDAV), and Canvas LMS (iCal with bidirectional assignment auto-sync and three-tier Fuse.js deduplication).

Software Engineering Intern — GRANTED Technologies *June – August 2025*

- Built a production-ready, AI-integrated blogging platform by developing a full-stack Next.js/React application backed by PostgreSQL and Prisma ORM.
- Reduced editorial workflow time by **40%** by designing intuitive UI/UX with a reusable component architecture and a streamlined admin interface.
- Decreased failed user verifications by **30%** by implementing a robust authentication system with NextAuth/Prisma and persistent session management.
- Worked directly with a 3-person engineering team on schema design and API contracts, translating business requirements into reliable, well-tested data flows.

PROJECTS

CalenDue — 1st Place Winner, CoHack 2025 | Next.js, TypeScript, Claude Sonnet 4, LangChain, Tailwind CSS

- Won 1st place at a 27-hour hackathon by building an AI-powered academic calendar platform that transforms syllabus documents into integrated calendars.

AgriLink — Agricultural Trade Marketplace | Next.js, TypeScript, Supabase, TailwindCSS

- Designed and built a marketplace platform connecting Nigerian agricultural producers and buyers, using Supabase for relational data storage and auth.
- Researched existing Canadian agricultural trade platforms (AgDealer, Farmbucks, Farmzilla) to inform data model and feature design.

Computer Science Student Society (CSSS) Email Automation Tool — Python, Windows COM APIs, AppleScript

- Developed a cross-platform Python automation tool reducing email campaign execution time by **92% (51 min to 4 min)** for the CSSS executive team.
- Engineered integration with Windows COM APIs and AppleScript for headless Outlook automation without credential storage, ensuring high security and reliability.

EXTRA: 2025-26 CSSS Event Director, 2025 Arts/Sci CS Peer Mentor, Uniting the Prairies Annual Volunteer
